

#### Ziel

Möglichkeiten zum strukturieren einer Angular-Anwendung mit Module kennen lernen und nutzen können.

## Aktuelles AppModule

```
@NgModule({
    imports: [
        BrowserModule, HttpClientModule, FormsModule
],
    declarations: [
        AppComponent,
        FlightSearchComponent,
        CityPipe
],
    bootstrap: [
        AppComponent
]
})
export class AppModule {
}
```

#### 

### FlightBookingModule (Feature Module)

```
@NgModule({
    imports: [
        CommonModule, FormsModule, SharedModule
],
    declarations: [
        FlightSearchComponent
],
    providers: [
        FlightService <----- Provider sind global verfügbar!
],
    exports: [
        FlightSearchComponent
]
})
export class FlightBookingModule {
}</pre>
```

SOFTWARE architekt.at

### AppModule (Root Module)

```
@NgModule({
    imports: [
        BrowserModule, HttpClientModule, FlightBookingModule
    ],
    declarations: [
        AppComponent
    ],
    bootstrap: [
        AppComponent
    ]
})
export class AppModule {
}
```

# Re-Exportieren von Modulen

```
@NgModule({
    imports: [
        CommonModule, FormsModule
    ],
    declarations: [
        CityPipe
    ],
    exports: [
        CityPipe, FormsModule
    ]
})
export class SharedModule {
}
```
